

U.S. emergency communications by Amateur Radio Operators would be greatly enhanced by the additional allocation in the 60 Meter (5 MHz) band. For use in the U.S. and in keeping with good amateur practice, there doesn't appear to me to be a reason to allow power output above 200 Watts. I also believe, if this band were to be implemented, we would be greatly served by having sub-band allocations for different modes.

Thank you for your time.

Jeff Chambers / A.R.S. KK7MQ
